White Consolidated Industries Inc.*, 199 F.3d 1295, 1301, 53 USPQ2d 1065, 1069 (Fed. Cir. 1999), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claim(s).
5. The limitations recited in independent claim 18 "... select and/or input, in said data server, medical data, in particular of the "vomiting" type; input and index health actions, in particular of the "hospitalization" type, corresponding to said medical data; configure, using said selected medical data, the monitoring rules, presented in particular in the form of SQL queries of the "if symptoms = vomiting and temperature > 38.5°C, observation period = 24h

health action = check urine" type, said monitoring rules being recorded and indexed with said health actions in said data server; and input and send alert protocols to said data server, in particular information relative to the contact information of the person to inform in the event that a realized health action would be different from the corresponding monitoring rule; means of analysis for analyzing the compatibility of said protocols thus sent, in particular the compatibility over time between the new monitoring rules and the former monitoring rules; a distant terminal, located with said patients, in particular with said patients that are maintained in the home; said distant terminal being connected to sensors, in particular to medical measuring devices, providing medical data to said distant terminal, and/or said distant terminal receiving said medical data from said users and/or said patients via a second man-machine interface of said distant terminal; and means of programming in order to program automatisms in said distant terminal, from said data server via said communications network, said automatisms being programmed using said medical data and said health actions indexed in said data server; said distant terminal including means for activating said automatisms thus programmed in order to: apply, periodically, said monitoring rules to said medical data provided to said distant terminal by generating health actions to be executed, check the execution, by said users, of said health actions, and generate alerts in the event said health actions are not executed by said users; wherein the system makes it possible to compile a personalized diagnosis base for each patient and to generate the triggering of appropriate alerts."

6. The limitations recited in independent claim 19 "... select and/or input, in said data server, medical data; input and index health actions corresponding to said medical data; configure, using said selected medical data, the monitoring rules, presented in the form of SQL

queries, said monitoring rules being recorded and indexed with said health actions in said data server; and input and send alert protocols to said data server in the event that a realized health action would be different from the corresponding monitoring rule; a distant terminal, located with said patients; said distant terminal being connected to sensors providing medical data to said distant terminal, and/or said distant terminal receiving said medical data from said users and/or said patients via a second man-machine interface of said distant terminal; means of programming in order to program automatisms in said distant terminal, from said data server via said communications network, said automatisms being programmed using said medical data and said health actions indexed in said data server; and means for activating said automatisms programmed in said distant terminal in order to: apply, periodically, said monitoring rules to said medical data provided to said distant terminal by generating health actions to be executed; check the execution, by said users, of said health actions; and generate alerts in the event said health actions are not executed by said users, wherein the system makes it possible to compile a personalized diagnosis base for each patient and to generate the triggering of appropriate alerts."

7. The limitations recited in independent claim 20 "... configure, using selected medical data and health actions input in said data server, monitoring rules in order to recommend one of the health actions, presented in the form of SQL queries, said monitoring rules being recorded in said data server; and input and send alert protocols to said data server in the event that a realized health action would be different from a corresponding monitoring rule; a distant terminal, located with said patients, said distant terminal being connected to sensors providing medical data to said distant terminal, and/or said distant terminal receiving said medical data from said users and/or said patients via a second man-machine interface of said distant terminal; means of programming

in order to program automatisms in said distant terminal, from said data server via said communications network in said data server; and means for activating said automatisms programmed in said distant terminal in order to: apply, periodically, Said monitoring rules to said medical data provided to and/or received by said distant terminal in order to recommend health actions to be executed; and generate alerts in the event said recommended health actions are not executed by said users, wherein the system makes it possible to generate the triggering of appropriate alerts.”

8. The limitations recited in independent claim 21 “... configure, using selected medical data and health actions input in said data saving means, monitoring rules in order to recommend one of the health actions, presented in the form of SQL queries, said monitoring rules being recorded in said data saving means; and input and send alert protocols to said data saving means in the event that a realized health action would be different from the corresponding monitoring rule; a distant terminal, located with said patients, said distant terminal being connected to sensors providing medical data to said distant terminal, and/or said distant terminal receiving said medical data from said users and/or said patients via a second man-machine interface of said distant terminal; means of programming in order to program automatisms in said distant terminal, from said data saving means via said communications network in said data saving means; and means for activating said automatisms programmed in said distant terminal in order to: apply, periodically, said monitoring rules to said medical data provided to and/or received by said distant terminal in order to recommend health actions to be executed; and generate alerts in the event said recommended health actions are not executed by said users, wherein the system makes it possible to generate the triggering of appropriate alerts.”

9. The limitations recited in independent claim 22 “... configuring monitoring rules using medical data and health actions; obtaining alert protocols; obtaining medical data by a distant terminal located with said patient, said obtained medical data being medical data measured by sensors and provided to said distant terminal, or medical data received from said users and/or said patient via a first man-machine interface of said distant terminal; applying, periodically, said monitoring rules to said medical data obtained by said distant terminal in order to recommend health actions to be executed; and generating at least an alert, taking into account at least one of said alert protocols, in the event said recommended health actions are not executed by said users.”

10. The limitations recited in independent claim 27 “... programming a distant terminal, located near the patient in such a way that the distant terminal implements an automatism applying the monitoring rules to the medical data provided to the terminal by a sensor associated With the patient and/or by a first man-machine interface of the distant terminal and/or by a second man-machine interface of a networked station and/or by the network; and applying by said automatism at least one of said monitoring rules to at least one of the medical data provided to said distant terminal by said first man-machine interface of the distant terminal, where said at least one of the medical data has been input by said medically-qualified person, in order to associate with said at least one of the medical data a health action to be executed, and generate an alert in the event said health action to be executed is different from the health action executed by at least a user.”

11. The limitations recited in independent claim 36 "... means for associating medical data with health actions via monitoring rules for use by the medically-qualified person; means for programming a distant terminal, located near the patient in such a way that the distant terminal implements an automatism applying the monitoring rules to the medical data provided to the terminal by at least one sensor that belongs to the patient and/or by a first man-machine interface of the distant terminal and/or by a second man-machine interface of a networked station and/or by the network, said automatism applying at least a monitoring rule to the medical data provided to the terminal by said first or second man-machine interface where said medical data was input by said medically-qualified person, in order to associate with said medical data a health action to be executed, and generate an alert in the event said health action to be executed is different-from the health action executed by at least a user; and means for saving said medical data, said health actions, and said monitoring rules."

12. The limitations recited in independent claim 37 "... an automatism implemented with medical data that are provided by at least one sensor that belongs to the patient and/or by a second man-machine interface of a distant terminal located near the patient and/or by a third man-machine interface of a networked station and/or by the network, said automatism applying at least a monitoring rule to the medical data provided to the terminal by said second or third man-machine interface, where said medical data was input by said medically-qualified person; in order to associate with said medical data a health action to be executed, and generate an alert in the event, said health action to be executed is different from the health action executed by at least a user."

13. When taken in context the claim(s) as a whole was/were not uncovered in the prior art i.e., the dependent claims are allowed as they depend upon an allowable independent claim.
14. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments regarding Statement of Reasons for Allowance."
